

7" Square Column

Loading

- Royal Outdoor Products Vinyl Columns are non-structural. For structural requirements, internal support and anchoring hardware such as Simpson or USP are required (refer to manufacturer's installation instructions).

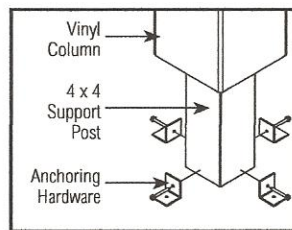

Dimensions – Measure Opening Height

- Depending on anchoring style, cut column 1" – 3" shorter than opening to allow for hardware and support post installation. If column is cut over 1" less than opening, decorative collar must be used at the top to retain column!

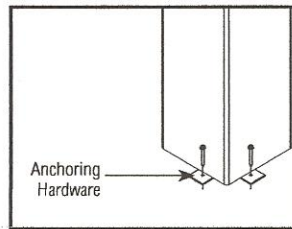

Installation (hardware not included)

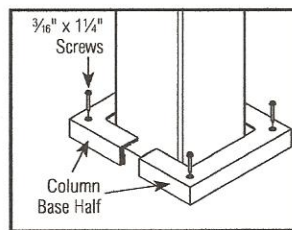

- Attach hardware to internal support (brackets with 4 x 4 shown) and slide column over support.

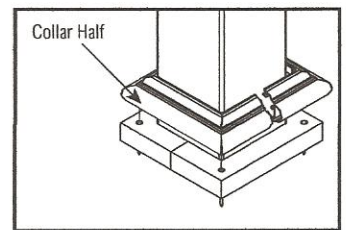

- Position internal support and anchor in place, top and bottom. Note that the column can be moved out of the way while installing the anchoring system.

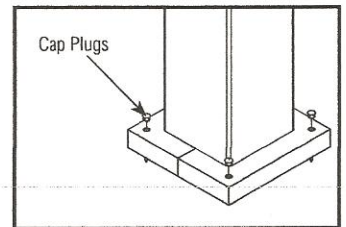

- Center column and snap bottom base halves together around column. Install using 3/16" x 1 1/4" screw or Tapcons (not included) depending on surface. Repeat step for top base halves.

- Assemble decorative collar halves together around column and snap together. Position collars with seams at 90 degrees to base seams and snap into column base.

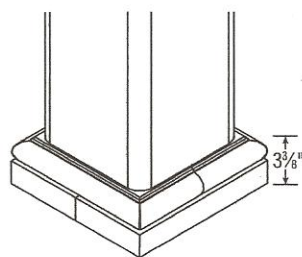

- If decorative collars are not used, insert cap plugs into holes.

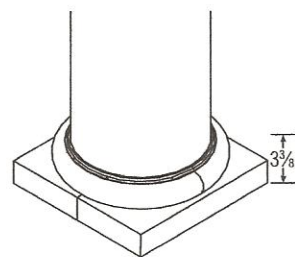

Care and Cleaning

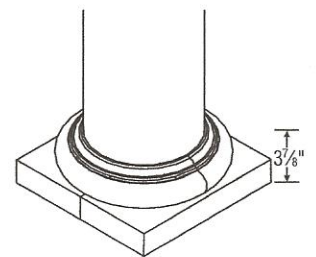

Ordinary dirt and mud usually washes off with a hose. At times it may be necessary to use a non-abrasive household cleaner to remove residue and then rinse with a hose.
